EDUCATION

Stanford University Stanford, CA

B.S. in Computer Science (Symbolic Systems) **Expected Graduation: December 2027**

RELEVANT EXPERIENCE

Amazon Bellevue, WA

Software Development Engineer Intern | Supply Chain Optimization Technologies **June 2026 – September 2026**

- Owned end-to-end and launched to pre-production a serverless AWS pipeline (CDK, Step Functions, Lambda, EventBridge) delivering ranked weekly root-cause digests, surfacing the 83% of vendor EDI failures (3.6M of 4.3M) that never reached vendors, found via 6 months of production telemetry analysis
- Condensed thousands of raw errors per vendor into a few plain-English fixes by designing root-cause clustering with trend detection (new, worsening, resolved) and integrating an LLM agent on Amazon Bedrock with a three-tier fallback; rewrote prompts to cut guardrail blocks from 14% to 4%
- Shipped the engine as an on-demand, user-facing tab in Vendor Central via a cross-account integration, projected to cut vendor error investigation from 5 hours to 1 per week per live-data feedback sessions with top enterprise vendors

Software Development Engineer Intern | Last Mile, Stops Team **June 2025 – September 2025**

- Replaced 2+ hour delivery-stop consolidation investigations across 6+ data sources with a self-service workflow by integrating routing, geospatial, and package-grouping data into Amazon's internal delivery-diagnostics platform, eliminating 8+ hours of weekly engineering toil
- Shipped 26+ previously siloed geospatial and package-level fields to production by extending a large-scale data pipeline end-to-end across Java services, S3 persistence, analytical schemas, and the React UI
- Prototyped an AWS Batch, Lambda, DynamoDB, and S3 pipeline rendering interactive Kepler.gl maps so engineers could visually diagnose consolidation defects, earning prioritization for continued development

Software Development Engineer Intern | Last Mile, Amazon Flex **June 2024 – September 2024**

- Built a location-preference signal for Amazon Flex's assignment optimizer, designing a distance-matrix algorithm in Java to compute normalized route-by-driver distances and feeding it into a Python integer-program solver to bias Block-driver assignments toward preferred locations
- Developed an event-driven S3, SNS, and Lambda ingestion pipeline and permanent driver-preference artifact, enabling constant-time preference lookup across distributed route-assignment services; validated in a Nashville-area pilot before production handoff

CollegePlanAI Remote

Full-Stack Software Engineer Intern **May 2025 – November 2025**

- Built and launched an AI-powered college essay web app (Next.js, Supabase, Anthropic Claude, Vercel AI SDK) streaming guidance grounded in each student's profile, essays, and activities to hundreds of students
- Owned core product systems as primary engineer at a 3-person startup, shipping Stripe Checkout and webhooks, credit-gated AI access, Google OAuth, and referrals before its acquisition by New Oriental Education

PROJECTS

GEM | *Product Design, React Native, Expo, Supabase* *April 2026 – June 2026*

- Architected the database schema and built core features (posting, saving, commenting, reporting, onboarding) for a CS 278 mobile app surfacing trusted, friend-sourced place recommendations over algorithmic ratings

Kyro | *Voice AI, Figma, React* *September 2025 – December 2025*

- Won Best Concept and Most Novel Product (Top 6 of 23 teams) at Stanford's CS 147 Project Expo for a voice-AI scheduling app that detects energy and burnout patterns and suggests rescheduling when capacity and calendar mismatch

Maternal Health Prototype x VSee | *Next.js, Supabase, OpenAI* *January 2025 – June 2025*

- Led a 7-person team building a maternal-health prototype with rule-based triage, multilingual speech I/O, and an OpenAI RAG assistant grounded in clinical protocols, advancing it to legal review after presenting to VSee's CEO

Finding Our Voice | 826 Valencia | *Co-Founder* *January 2022 – Present*

- Co-founded a bilingual mentorship and storytelling platform serving 30+ immigrant high school students; annually supports an outreach campaign that raises $1.2M+ per year for 7,000+ students

TECHNICAL SKILLS & AWARDS

- **Languages:** Python, Java, C++, JavaScript/TypeScript, Node.js, Spanish, English, Italian (conversational)
- **Frameworks & Libraries:** React, React Native, Next.js, Supabase, Clerk, Stripe
- **Cloud & Infrastructure:** AWS CDK, Lambda, Step Functions, DynamoDB, S3, EventBridge, Batch, SNS/SQS
- **AI/ML:** Anthropic Claude, OpenAI, Vercel AI SDK, RAG, LLMs, embeddings
- **Developer Tools:** Git, Linux, Vercel, CI/CD, Jupyter, Figma, Claude Code
- **Honors & Fellowships:** ColorStack Member | HSF Scholar | 10KD Scholar
